

# Wilson's Creek White Suffolks

WS.728

## *2023 White Suffolk Ram Sale*

**60 Quality White Suffolk Rams**

**Monday 30<sup>th</sup> January 2023**

**839 Kingstown Rd**

**Uralla NSW 2358**

**Inspection from 9:30am, Sale at 11am**

# Welcome

It is our pleasure to welcome past and future ram buyers to our 2023 on property White Suffolk Ram Sale at Wilson's Creek. We trust that those who have purchased rams in the past have been rewarded with plenty of quality lambs on the ground that have performed and have rewarded you when they have hit the market. Year on year we aim to make positive genetic gains while keeping the quality of our rams at the forefront. This year all rams have been inducted on the Barbervax program.

## Our Breeding Program

We aim to produce well structured long bodied rams that exhibit good growth rates and carcase composition whilst maintaining low birth weights to ensure suitability to join to merino ewes.

This year we have continued to introduce several AI sires which has given us access to some of the best sires from within the breed. We have witnessed many gains in doing so.

**THE AUSTRALIAN SHEEP BREEDING VALUES PROVIDED IN THE CATALOGUE ARE AS FOLLOWS:**

**Birth Weight (BWT):** estimates the genetic difference between animals in liveweight at birth

**Weaning Weight (WWT):** estimates the genetic difference in live weight at 100 days of age.

**Post Weaning Weight (PWWT):** estimates the genetic difference in live weight at 225 days of age.

**Fat (PFAT):** Estimates the genetic difference in GR fat depth at 45kg liveweight.

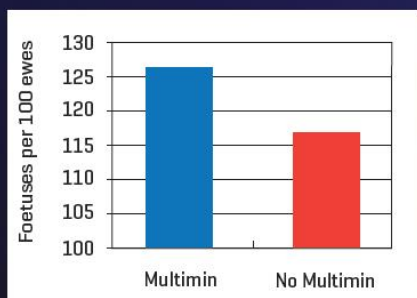

**Eye Muscle Depth (PEMD):** Estimates the genetic difference in eye muscle depth at the C site in a 45kg liveweight animal

**Worm Egg Count (PWEC):** Estimates the genetic difference between animals in worm burden at 225 days of age

## FOR INCREASED FERTILITY, CONCEPTION & PRODUCTIVITY

Joining is a high demand period for ewes. Australian research<sup>1</sup> has found that ewes treated with Multimin around a month before joining showed improved conception rates compared to untreated animals.

Multimin provided ewes with a significant improvement in fertility<sup>1</sup>

1. Swaney et al (2014). WBC, Cairns  
Not a registered label claim

- 3 in 1 trace mineral injection
- Rapid absorption and accurate dosing
- For strategic trace mineral top up
- World class scientific research

Shaping the future  
of animal health

Many thanks to Virbac for their continued sponsorship of our sale.  
Speak to Matthew Falconer at the sale, Virbac's Area Sales Manager  
for New England about the best ways to increase fertility, conception  
and productivity in your flock.

## UNDERSTANDING SELECTION INDEXES:

The **LEQ (Lamb eating quality) Index** is targeted at progressive terminal lamb producers interested in improving the meat eating quality of their prime lambs while continuing to improve production in a balanced way including Birth Weight (BWT) and Worm Egg Count (WEC)

The **TCP (Terminal Carcase Production) index** has been created by Sheep Genetics to assist producers to achieve both gains in their major production traits, post-weaning weight and muscling, as well as ensuring consumer satisfaction from lamb is maintained through focusing on key eating quality traits such as shear force (tenderness) and intramuscular fat (marbling).

## PERCENTILE HIGHLIGHTS:

Percentile highlights indicate where an animal sits in relation to other animals in the analysis from the current year drop for top and bottom percentiles. This shows where animals rank for that trait within the analysis. Some traits that have an optimum value, such as birth weight (BWT) or fat (PFAT) are not listed with a percentile highlight.

## HOW TO READ PERCENTILE HIGHLIGHTS:

Animals that rank in the top 5%, 10% and 20% industry percentile for a particular trait or index will be marked using purple, blue and green respectively.
